BOILERMAG FILTER 28mm

High-performance magnetic filter designed for central heating installations which removes all contaminants (magnetic and non-magnetic) from th installation and effectively stops them inside the device. Dual-flo technology - maximises the efficiency of contaminant capture, and 360 control allows quick and easy installation at any angle on the installation.
Set of connection valves are included.
3/4" and 1" filter equivalents, but with direct clamp connection whe installation is made of copper.

Below you can see the pictures showing what kind of contaminatio is in your installation.
