

## The Comfort Regulator

The Comfort Regulator is a wireless temperature controller equipped with a temperature sensor, display and buttons for room temperature control. It provides the Comfort Module with information about the temperature in the zone in which it is located. The controller allows for independent control of up to four radiator heads.

Comfort system and its elements are dedicated for boilers **EcoCondens Gold Plus, EcoCondens Integra II Plus, EcoCondens Solid Plus**, and non-condensing boiler line **ELEGANCE** which are equipped with LIN interface.
