

TERMET I-3 Plus

The main controller Termet I-3 Plus is a multifunctional device designed to operate central heating systems. The main task of the controller is to control e.g. operation of pumps, mixing valves, central heating temperature, domestic hot water temperature and other installation accessories.

Thanks to the extensive software, the controller can perform a number of functions:

- smooth control of three mixing valves
- control of the D.H.W. pump
- operation of the solar system
- pump control with PWM signal
- two 0-10V outputs
- OPEN-THERM® communication
- two voltage-free outputs configurable
- two voltage outputs configurable
- cooperation with three binary room controllers
- cooperation with the room controller with RS communication
- possibility of connecting Wi-Fi RS module
- control of additional circuit by i-1m module
